

## EXPERIMENT - 8

### Simple AJAX program

**Aim:**

To create a simple AJAX program

**Key points:**

In this content in the another text file will be displayed when we click on button.

This should be run on localhost

**Code:**

AJAX PAGE:

```
<html>

    <head>

    </head>

    <body>

        <div id="demo">

            <h2>click to view</h2>

            <button type="button" onclick="loadDoc()">view</button>

        </div>

    <script>

        function loadDoc() {

            var xhttp = new XMLHttpRequest();

            xhttp.onreadystatechange = function() {

                if (this.readyState == 4 && this.status == 200) {

                    document.getElementById("demo").innerHTML =

                    this.responseText;

                }

            };

        }

    </script>

</html>
```

```
        xhttp.open("GET", "info.txt", true);  
        xhttp.send();  
    }  
</script>  
</body>  
</html>
```

TEXT:

hello

this is ajax

### **TAGS:**

<head>...</head> : Contains meta information of the page

<title>...</title> : Title of the web page.

<body>...</body> : Body of the web page.

<script>...</script> : to include any script in the page.

## Screenshots:

click to view

view

**Conclusion:**

A simple AJAX program to display content in another page.
